**LAKE LANIER ISLANDS
DEVELOPMENT AUTHORITY***

To Whom It May Concern:

It is my pleasure to recommend Rochester & Associates, Inc. for surveying, civil engineering and project management. During the past 6 years, the Lake Lanier Islands Development Authority (LLIDA) team has worked directly with Rochester & Associates, on numerous projects including the Lake Lanier Islands Infrastructure Improvements Project. LLIDA is extremely pleased with every aspect of the work product produced by Rochester and Associates.

The improvement project included the design, permitting and construction administration for the reconstruction of roadways and infrastructure throughout the 1,100 acre Resort. Approximately 30,000 LF of 2" to 12" waterline was installed in conjunction with the roadway improvements. Rochester & Associates also performed the design, permitting and construction services for the installation of sewer force mains, reuse water mains, and gravity sewer lines. Their experience and attention to detail led to a successful project in terms of budget, quality, on time completion and sensitivity to the natural resource of the islands and Lake Lanier. The \$20M investment was all completed while the resort was open for business every day.

Rochester & Associates is a valuable member of LLIDA's project team and LLIDA would recommend them unconditionally for all your surveying, engineering and project management needs.

I would be happy to respond to any questions you might have about LLIDA's experience with the Rochester team.

Sincerely,

Bill Donohue, Executive Director
Lake Lanier Islands Development Authority
